TRIDONIC

RoHS

Module EM-ES 08/10/12 Mk2

A CALL AND A CONTRACT OF A CON

EM LED linear / area

Product description

- Lighting module with 8, 10 or 12 LEDs
- For use in escape route signs
- + Compatible with EM powerLED 1 W & 2 W

Properties

- Suitable for Tridonic EM powerLED emergency lighting units
- For permanent and standby operation
- Wide 120° distribution of light for uniform illumination
- Operation on a constant current source
- Replacement for 8 W T5 flourescent lamp
- Several options for uniform light distribution
- Can be interconnected to create longer strips
- Low energy consumption
- Long life thanks to low operating temperature
- Provides a maintenance-free escape sign system
- Simple mounting/installation
- Push-in terminals for simple and quick wiring

Note

Separate status LED required

| ES 12 285 Mk2 | 89800248 | 285 mm | 107 mm |

 $^{\odot}$ Tolerance range for optical and electrical data: ±15 %

[®] Exceeding the max. operating current leads to an overload on the LED module. This may in turn result in a significant reduction in life-time or even destruction of the LED module.

³ Data for operation with 350 mA.

[®] If the max. temperature limits are exceeded, the life of the module will be reduced or the module may be damaged. The temperature

of the LED module at the tc-point is to be measured in the thermally stable state. For tc-point see the above diagram.

EM LED Light Engines

Thermal design and heat sink

The rated life of LED products depends to a large extent on the temperature. If the permissible temperature limits are exceeded, the life of the EM-ES will be greatly reduced or the EM-ES may be destroyed.

tc point, ambient temperature and life-time

The temperature at tp reference point is crucial for the light output and life-time of a LED product.

| EM-ES | Mk2 |
|-------|-----|
| | |

| tp | | | | | | |
|----------|-----------|-----------|-----------|-----------|-----------|-----------|

| ture | | | | | | |
| 60 °C | 50,000 h |
| 57 °C | 50,000 h | х | х | х | х | х |

Operating unit

EM powerLED 1 – 2 W (see separate data sheet)

Precautions in Handling

Safety Precautions

The LED light output is intense enough to cause injury to human eyes if viewed directly. Precautions must be taken to avoid looking directly at the LEDs with unprotected eyes [according IEC 60825-1 (EN 60825-1)].

The EM-ES are delivered in an ESD protected packaging.

Precaution in driving

Products are designed exclusively for forward current driving. Please avoid driving system with reverse voltage, which may cause migration which damages the product.

Reverse polarity and secondary switching can damage the LED module.

Cleaning

Chemical solvents or cleaning agents must not be used to clean the LED component.

Mechanical stress on the LED component must be avoided. It is best to use a soft brush, damp cloth or low-pressure compressed air.

Storage

The products should be stored away from direct light in dry location. The LEDs should be kept at 30 °C or less and 70 % RH or less. Please avoid rapid transitions in ambient temperature, especially in high humidity environments where condensation could occur.

Mounting instruction

None of the components of the EM-ES (substrate, LED, electronic components etc.) may be exposed to tensile or compressive stresses.

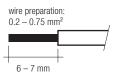

Max. torque for fixing: 0.5 Nm.

The LED modules are mounted with 4 screws per module. In order not to damage the modules only rounded head screws and an additional plastic flat washer should be used. Fixing can be achieved using M4 plastic screws or M4 plastic rivets through the holes provided or alternatively by appropriate adhesive

through the holes provided or alternatively by appropriate adhesive pads positioned in the fixing areas.

Wiring type and cross section

The wiring can be solid cable with a cross section of 0.2 to 0.75 mm^2 . For the push-wire connection you have to strip the insulation (6–7 mm).

Inserting stranded wires / removing wires by lightly pressing on the push button.

Chemical substance may harm the LED module. Chemical reactions could lead to colour shift, reduced luminous flux or a total failure of the module caused by corrosion of electrical connections.

Materials which are used in LED applications (e.g. sealings, adhesives) must not produce dissolver gas. They must not be condensation curing based, acetate curing based or contain sulfur, chlorine or phthalate.

Avoid corrosive atmosphere during usage and storage.

EOS/ESD safety guidelines

The device / module contains components that are sensitive to electrostatic discharge and may only be installed in the factory and on site if appropriate EOS/ESD protection measures have been taken. No special measures need be taken for devices/modules with enclosed casings (contact with the pc board not possible), just normal installation practice. Please note the requirements set out in the document EOS / ESD guidelines (Guideline_EOS_ESD.pdf) at: http://www.tridonic.com/com/en/technical-docs.asp

Precautions for safe operation

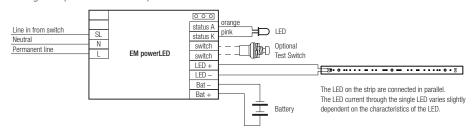

The operating unit must be SELV classified or else the circuit board must be insulated by the luminaire.

Standards

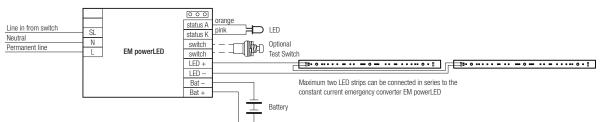

- EN 62031
- EN 62471
